Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters.Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: a b c -
Output: Forward Playlist: a b c
Backward Playlist: c b a

Answer

```c
#include <stdio.h>
#include <stdlib.h>

struct Node {
 char item;
  struct Node* next;
  struct Node* prev;
};
// You are using GCC
void insertAtEnd(struct Node** head, char item) {
  //type your code here
  struct Node* newnode = (struct Node*)malloc(sizeof(struct Node));
  newnode->item = item;
  newnode->next=NULL;
  newnode-> prev = NULL;
  if(*head == NULL){
    *head = newnode;}
    else{
```

```c
        struct Node*temp = *head;
        while(temp->next!=NULL){
            temp = temp->next;
        }
        temp->next = newnode;
        newnode->prev = temp;
    }
}
void displayForward(struct Node* head) {
    //type your code here
    while(head !=NULL){
        printf("%c ",head->item);
        head = head ->next;
    }
    printf("\n");
}

void displayBackward(struct Node* tail) {
    //type your code here
    while(tail!=NULL){
        printf("%c ",tail->item);
        tail = tail->prev;
    }
    printf("\n");
}

void freePlaylist(struct Node* head) {
    //type your code here
    struct Node*temp;
    while(head!=NULL){
        temp = head;
        head = head->next;
        free(temp);
    }
}
int main() {
    struct Node* playlist = NULL;
    char item;

    while (1) {
        scanf(" %c", &item);
        if (item == '-') {
```

```c
        break;
    }
    insertAtEnd(&playlist, item);
}

struct Node* tail = playlist;
while (tail->next != NULL) {
    tail = tail->next;
}

printf("Forward Playlist: ");
displayForward(playlist);

printf("Backward Playlist: ");
displayBackward(tail);

freePlaylist(playlist);

return 0;
}
```
